RESEARCH INTEREST	My research sits at the intersection of human-computer interaction (HCI) , digital health , and inclusive AI . I design and empirically evaluate AI-augmented systems—spanning mobile applications, immersive (VR) environments, and LLM-powered tools—grounded in multimodal behavioral, physiological, and contextual data. A particular emphasis is placed on preserving human agency in AI-driven processes and on the meaningful integration of AI into real-world workflows across diverse professional and social contexts, informed by participatory design and evidence synthesis.
